Bibliography Supplement

The following bibliography is a supplement to Wood & Bright (1987: 1–685) and lists only that literature missed by the original volume or published since 1987. While the original intent was to cite the names of all species of Scolytidae and Platypodidae mentioned in this literature, copies of many items could not be found (these are marked by an asterisk [*]) and several others were unintentionally overlooked by indexers for reasons unknown to us.

Addendum

Nine and one-half years have passed since this catalog was started. During those years significant world events have occurred, some of which have impacted the catalog. Several nations have ceased to exist, while other new ones have come into existence. The consequent changes in names or in new spellings of old names have been of concern. While we have attempted to incorporate many of those changes into the catalog, others have not been included. For example, the recent fragmentation of the former Soviet Union (USSR) into independent republics was not included. We have, however, included most, if not all, of the name changes among African nations. In 1957 it was announced by the news media that French Guiana was to become independent and would be named "Cayenne." On the strength of that announcement, we used the name Cayenne throughout the catalog. Unfortunately, the official change in name has not yet occurred.

The basic text of the catalog, including most notes, but excluding "References," was prepared by SLW. Notes prepared by DEB bear his initials. About half of the host records for Platypodidae and about one-third of those for Xyleborini came from DEB. While most of the literature citations listed under References, published from 1758 to 1959, came from SLW, his files also cover literature to 1972 or 1973 in reasonable detail and are included, as were other incidental references to 1991. Approximately two-thirds of the citations listed under References, published from 1960 to 1991, came from DEB except in *Dendroctonus*, *Ips*, Xyleborini, and Platypodidae, where the percentage of his contributions was substantially higher.

The funds needed for publication of Part 2 of the catalog, both volumes 2A and 2B, came from four sources. Approximately 57 percent came from funds conserved from grants of the U.S. sponsors (USDA and NSF), 34 percent from Canada, 2 percent from Brigham Young University, and 7 percent from S. L. Wood. The Canadian portion of publication support for Part 2 of this catalog was funded by Forestry Canada and the British Columbia Ministry of Forests under the Canada-British Columbia Partnership Agreement on Forest Resource Development: FRDA II (1991-1995). Dr. R. Asselin, Director, CLBRR, Agriculture Canada; Dr. L. Carlson, Deputy Director, Forestry Canada; and Mr. A. Shortreid, Forestry Technology Transfer Officer, Forestry Canada, arranged for and expedited the Canadian funds used for publication.

We regret the spelling error on p. 7 in the Introduction of the name of Derrick Bells.

Family Platypodidae Index

This index includes all Latin names used in this catalog for Platypodidae. Family-group names (family, subfamily, tribe) and names applied below the rank of subspecies (including aberrations, variations, nomen nudums) are given in regular type. Valid names of genera and species are in bold type. The names of synonyms of genera and species, subgeneric names, and subspecific names are given in italics. The names of fossil species are preceded by an asterisk (*). Fossil species are given at the beginning of the index and are also listed alphabetically with other names.

Family Scolytidae Index

This index includes all Latin names used in this catalog for Scolytidae. Family-group names (family, subfamily, tribe) and names applied below the rank of subspecies (including aberrations, variations, nomen nudums) are given in regular type. Valid names of genera and species are in bold type. The names of synonyms of genera and species, subgeneric names, and subspecific names are given in italics. The names are listed in alphabetical order by the computer; however, the user must realize that the computer reads parentheses () as a letter of the alphabet preceding the letter "a." The names of fossil species are preceded by an asterisk (*). Fossil species are given at the beginning of the index and are also listed alphabetically with other names.
